COMP3097 – Mobile App Development II

Project Proposal

Cover Page

Project Title: Advanced ToDo Mobile Application
Group Number: G9
CRN: 50488

Team Members (Name – Student ID):

- Pratik Pokhrel — 101487514
- Khalid Wasim Mushir — 101514568
- Vaishnavi Vodapalli — 101504750

Platform / Tools: iOS application developed using Xcode (SwiftUI)
Target Device: iPhone 14 (Portrait orientation)

General Description of the Project

The Advanced ToDo Mobile Application is an iOS productivity app designed to help users organize and manage their daily tasks more effectively. The app allows users to create tasks with titles, optional notes, task type, and due date with time. Each task can be marked as pending or completed, making it easy to track progress.

To improve usability, the application highlights tasks that are overdue or close to their due date. The app also supports multiple task types, allowing users to create and manage different kinds of tasks. The application is intended for students and working individuals who want a simple, clean, and easy-to-use task management app on their mobile device. All data will be stored persistently so tasks remain saved even after the app is closed.

Mockups of All Screens (with brief descriptions)

Note: The following mockups represent the visual design and layout of the application screens.

---

1) Launch Screen

The launch screen appears briefly when the app starts and displays the application name along with the names of the team members.

Figure 1: Launch Screen mockup (iPhone 14)

---

2) Home / Task List Screen

This screen displays a list of all tasks created by the user. Each task shows its title, due date and time, and current status. Tasks that are overdue or close to their deadline are visually highlighted. Users can also filter tasks by All, Pending, or Completed.

---

3) Add / Edit Task Screen

The Add / Edit Task screen allows users to create a new task or modify an existing one. Users can enter a task title, notes, select a task type, and choose a due date and time. The screen includes Save and Cancel options.

---

4) Task Details Screen

This screen shows detailed information about a selected task, including its title, description, task type, due date, and status. From this screen, users can mark the task as completed, edit it, or delete it.

---

5) Task Type Manager Screen

The Task Type Manager screen allows users to manage different task types. Users can add new task types or edit existing ones, supporting the advanced functionality of the application.

Summary

This proposal presents an iOS mobile application developed using SwiftUI in Xcode, optimized for iPhone 14 in portrait mode. The Advanced ToDo Mobile Application focuses on clear navigation, clean design, and practical task management features, providing a solid foundation for the next stages of development.
